

How to Export MAP Fluency Data

1. Choose Exports from the Reports menu to set up and export MAP Reading Fluency data as an Excel® spreadsheet.
2. Choose your criteria and click Next. Student ID will always be included in the file. If presented with the option, please be sure to include the following demographic information:
 - School Name(s)
 - Student Name(s)
 - Student ID(s)
 - Teacher Name(s)
 - Grade Level(s)
 - Assessment Period(s) or Date(s)
 - You can then choose to save the spreadsheet as an Excel XLSX or CSV file. Once you've generated an export, it will be available for 14 days under the Recent tab.

The screenshot shows the 'Export options' step of the Just Right Reader interface. At the top, there are tabs for 'New' and 'Recent', with a callout 'Access recently-generated exports' pointing to the 'Recent' tab. Below the tabs, there are two steps: '1 Export options' and '2 Download data'. The main section is titled 'Select up to 3 term(s) (Required)' and shows a dropdown menu with 'Winter 2019-2020' selected. Below this is the 'Choose export criteria' section, which is divided into three columns: 'Schools (Required)', 'Grades (Required)', and 'Assigned Test (Required)'. The 'Schools' column has a checkbox for 'All Schools' and a note '3 schools selected'. The 'Grades' column has a checkbox for 'All' and a list of grades from Pre-kindergarten to 8th Grade, all of which are checked. The 'Assigned Test' column has a checkbox for 'All' and a list of tests: 'Adaptive Oral Reading', 'Foundational Skills', and 'Progress Monitoring', all of which are checked. To the right of these columns is the 'Student Details (Optional)' section, which has a checkbox for 'All' and a list of student details: 'Name (first, middle, last)', 'Date of Birth', 'Gender', and 'Ethnicity', all of which are unchecked. A callout 'Student data is optional' points to this section. At the bottom right, there is a 'Manage Schools' link.
